

## NetRemote Duet Applet

### Quick instructions:

- Unpack zip file into your <squeezecenter installation>/Plugins directory.
- After restarting squeezecenter, you will see the NetRemote applet on the duet remote as an option to be installed (under settings->advanced->Applet Installer).
- Install the applet.
- It installs two widgets:
  - o First widget is to set the IP address (settings->advanced->VUDU NetRemote IP); you need to set the IP address of your VUDU box there.
  - o Second widget is the actual NetRemote (Extras->VUDU NetRemote).

Note: The NetRemote feature can still hang (and even reboot the duet remote) if it cannot talk to the VUDU box (wrong IP address for the VUDU box or duet is in a different subnet).
